Academia-Industry-Society-Federation Partnerships in the Biomedical Engineering Domain: Models, Challenges and Rewards

**S. Krishnan*; Wentworth Institute of Technology, Boston*

The presentation aims to explore the models of partnerships involving academia and industry with two additional entities: Biomedical Engineering society and the global professional international Federation for Medical and Biological Engineering.

Ways in which effective partnerships of these four entities can create meaningful avenues for technological advancements, productivity and intellectual property escalations as well as several potential challenges that may be encountered in the implementation phases of these partnerships will be addressed.
